

# Wall Patch & Wall Patch Smooth

**Wall Patch and Wall Patch Smooth** are two quick setting cementitious patching and finishing compounds ideally suited to fill small cosmetic imperfections in vertical concrete surfaces. Whether it is a large area or small, the smooth and creamy nature of Wall Patch or Wall Patch Smooth, combined with the light grey color, will make the job go easier and the concrete more attractive. Both products are manufactured with special cements that develop lower strengths to make it easier to apply and then rub off, leaving the repair mortar just in the surface imperfections. Wall Patch Smooth is produced without the addition of aggregate making it ideal for tilt wall panels, while regular Wall Patch is best suited for poured concrete walls. Wall Patch products dry quickly without cracking and shrinking, and can later be rubbed, sealed, or painted as desired.

## ADVANTAGES

- ✓ Easy mixing - Just add water
- ✓ Two formulations: Regular and Smooth
- ✓ No Gypsum
- ✓ Creamy Feel
- ✓ May be Rubbed
