

# SurePoxy Protective Coating WD

**SurePoxy Protective Coating WD** is a two-component, water-dispersed, VOC compliant, epoxy curing, and sealing compound and a protective coating. SurePoxy Protective Coating WD provides abrasion resistance, chemical resistance, and in particular has excellent resistance to deicing chemicals. The singular advantage of SurePoxy Protective Coating is that it may be applied to green or freshly placed concrete as both curing & sealing compound and as a long-lasting epoxy protective coating on the day of concrete placement. As a result, contractors do not need to wait 28 days prior to installing SurePoxy Protective Coating WD, nor do they need to abrade the concrete surface prior to application. Saving time and labor costs, while providing an attractive long-term coating solution is what makes SurePoxy Protective Coating WD truly advantageous.

## FEATURES & BENEFITS

- ☑ Easy to Use 1:1 Mix Ratio
- ☑ Application to Green Concrete
- ☑ Non-Corrosive
- ☑ Economical
- ☑ May Contribute to LEED Points
- ☑ Chemical Resistance
- ☑ Curing & Sealing Compound
- ☑ Long-Lasting Epoxy Coating

## APPLICATIONS

- ☑ Residential Construction
- ☑ Commercial Construction
- ☑ Industrial Maintenance

## SPECIFICATIONS

- ☑ ASTM C-309, Types I or II, Classes A & B
- ☑ AASHTO M-148, Types I or II, Classes A & B
- ☑ ASTM C-1315, Types I or II, Class B

## PACKAGING

- ☑ 2-Gallon Units
- ☑ 10-Gallon Units
